

Modus

Fabric Banding Specification

Fabrics

We offer a standard range of fabrics from some of Europe's leading textiles manufacturers, including Kvadrat, Bute, Camira, Svensson and Gabriel, that fall into the bands below. If you require a fabric that is not shown please contact us for pricing and to confirm suitability. We have highlighted the most sustainable fabrics with the  symbol. Fabrics have been chosen that meet the following criteria:

- a) contain 100% renewable fibres,
- b) contain \geq 90% renewable fibres including bast fibres,
- c) are Cradle to Cradle Certified™, EU Ecolabel, OekoTex Standard 100 or GREENGUARD Gold certified and contain \geq 70% renewable fibres,
- d) contain \geq 75% recycled fibres.

General Terms & Conditions for COM and COL

Before confirmation of any order including a COM or COL requirement, Modus will require a sample of material or leather to assess suitability. For plain colour fabrics the size of the sample must be at least 500 x 500mm. For pattern repeat fabrics please contact us to discuss the size of sample required. All fabrics will be assumed to measure 1400mm in width unless advised otherwise.

If test results prove inconclusive, a greater sized sample may be requested for testing on a complete product. Conclusions from the sample approval process may result in a request for fabric quantities beyond the standard lengths published and may also result in increased lead times. The acceptance of COM or COL on any order may extend lead times beyond standard time frames and this may be exacerbated by any delay in the provision of samples or supply of materials.

If material is accepted for production, Modus do not accept any responsibility for issues arising with regard to colour, durability or suitability for use in its intended environment. In all cases, the customer is responsible for assessing the fire retardant properties of the material supplied.

Fillings

All foam for our sofas and easy chairs is made from CertiPUR certified foam which contains no heavy metals, no formaldehyde, no PBDE, TDCPP, TCEP or 'Tris' flame retardants, no PCB, no phthalates, no vinyl chloride and has TVOC emissions of less than 0.5 parts per million. Our feathers have full traceability and are certified to the European Down And Feather Association Traceability Standard which stipulates that no down or feathers may be procured or processed where they have been harvested in a manner that inflicts pain upon any animal. All down and feathers are by products of poultry meat production or are collected during moulting in accordance with the applicable legislation. The origin of down and feather filling materials is carefully documented and independently audited to ensure full traceability.

Fire Retardancy

In accordance with the Regulatory Reform Fire Safety Order 2005 (RRFSO) It is the duty of the 'Responsible Person' to ensure that all furniture within the building meets the fire safety needs identified in the risk assessment.

BS EN 1021 parts 1 & 2 relates to Cigarette & Match = Low Hazard
BS 5852 ignition Crib 5 = Medium Hazard

Abrasion

Abrasion figures refer to the Martindale Test.
